

# Amazon SES SMTP server configuration

First of all, please, make sure that LUCY version is updated to 4.6.7 or later. In case you are not aware of your Amazon SES SMTP credentials please follow this instruction from Amazon:

<https://docs.aws.amazon.com/ses/latest/DeveloperGuide/smtp-credentials.html>

- Proceed to **Settings** → **SMTP Servers** and click **Add server** button.

- Enter chosen Amazon SES SMTP endpoint to the SMTP server field. List of Amazon SES SMTP endpoints is here: <https://docs.aws.amazon.com/ses/latest/DeveloperGuide/smtp-connect.html>
- Set **SMTP port** to 587 or 2587.
- In the **SMTP Encryption** drop-down menu, please, choose **STARTTLS** option
- Enter your credentials to **SMTP login** and **SMTP password** fields.
- Click **Save**

## New Server

SMTP Host	<input type="text" value="email-smtp.us-east-1.amazonaws.com"/>
SMTP Port	<input type="text" value="587"/>
SMTP Encryption	<input type="text" value="STARTTLS"/>
SMTP Login	<input type="text" value="yourAmazonSES@SMTP.login"/>
SMTP Password	<input type="password" value="....."/>
SMTP Description	<input type="text"/>
