

## Create a Client

Create a client or choose the built in client (a client can be your own organization or the company who asked you to perform a phishing test). This is important because you can also create [view only accounts](#) which are associated with those clients.

The screenshot shows the 'New Campaign' form in the LUCY interface. The form includes a 'Name' field with the value 'Lucy Phishing Campaign'. The 'Client' dropdown menu is highlighted with a red box, showing 'Please select...' and 'Lucy Test' as options. Below the dropdown, the 'Setup Mode' section has three radio buttons: 'Expert Setup (Manual Configuration)', 'Setup Wizard' (which is selected), and 'Start with Sample Campaign'. The 'Benchmark Sector' dropdown is set to 'N/A'. There is a 'Notes' text area and a 'Save' button at the bottom.

New clients can be created under "clients". In LUCY v. 2.5 and higher this is created under settings/clients.
