

LUCY > 3.1 allows the user to quickly create a copy of one or multiple scenario templates (settings/scenario-templates). To create a copy you first need to select the template(s) and then click on "action". Under the action menu you will find a "copy" button. Once activated LUCY will create a 1:1 copy of the template and add a number to the template name:

The screenshot displays the 'Scenario Templates' management interface. At the top, there are filters for Type, Category, Audience, Actions, and Delete. A 'Help' dropdown menu is open, showing options: '+ New', 'Copy' (highlighted with a red box), 'Backup', 'Restore', and 'Download'. The main content area lists templates under two categories: 'Awareness Only Templates' and 'Web Based Templates'. The 'Web Based Templates' section shows a list of templates, including 'Blank' and 'Contest'. The 'Contest' template is selected, and its details are shown below, including a description and a date. The 'Contest (copy)' template is also visible, indicating a successful copy operation.
