

For all scenarios that include a file based attack, you will have the option within the scenario settings to disable the landing page. Your attack, therefore, will only include a mail, without a webpage. The settings can be found here (see screenshot).

The screenshot shows a web interface for configuring a scenario. It includes fields for Name, Domain, Subdomain, and a checkbox for 'Enable Landing' which is highlighted with a red box. Other options include 'Use SSL', 'Prepend Domain', 'Send Link to Associated Website Automatically', and 'Send Information Collected'.

Note: It is not necessary to disable the landing page. If you don't want specific users to access the webpage you could simply delete the [link](#) within the message template.
