

For all scenarios that include a file based attack, you will have the option within the scenario settings to disable the landing page. Your attack, therefore, will only include a mail, without a webpage. The settings can be found here (see screenshot).

The screenshot shows a web form titled 'Scenario Settings'. It includes fields for 'Name' (set to 'Test'), 'Domain' (set to 'alphanumeric'), and 'Subdomain' (set to 'alphanumeric'). There are several checkboxes: 'Use SSL' (unchecked), 'Permanent Link' (unchecked), 'Disable Landing Page' (checked and highlighted with a red box), 'Send Link to Anonymous Website Automatically' (unchecked), and 'Send Information to Anonymous' (unchecked). At the bottom, there are fields for 'Accession Number' (set to 'Data Subject') and 'Contact Email' (set to 'info@').

Note: It is not necessary to disable the landing page. If you don't want specific users to access the webpage you could simply delete the [link](#) within the message template.
