

Background Info:

After running a phishing campaign you might quickly want to identify users who failed the phishing simulation and re-use them for another campaign (e.g. awareness campaign).

Configuration

On the campaign summary you will find an export button that allows you to export your campaign statistics into CSV or export failed & successful phishing recipients:

Once you click the export button LUCY will create a new group within the recipients navigation tab that contains the according users. Those groups can then be used for further specific campaigns:
