

Within the advanced settings (/admin/settings) menu you will find a factory reset button. This button will restore your original LUCY configuration and delete all data (recipients, logs, campaigns, configurations etc.):

The screenshot shows the 'Advanced Settings' page under the 'Settings' menu. On the right side, there is a 'Factory Reset' button with a red box around it. On the left, there are various configuration options like Date & Time, Time Zone, Date Format, Default Editor Type, Password Settings, Rotation Period, Bruteforce Protection, 2FA Key, Ajax Update Period, Export Data Separator, Export Double Quotes, and Campaign Approval Period. A red box also highlights the 'Advanced Settings' link at the bottom of the sidebar.
