

WITH LUCY, you can carry out multi-stage attacks and start automated or manual, interactive communication with the recipients. Two functions are available for this purpose:

- LUCY Mail Manager
- LURE attack type

Double Barrel Attack

When using Double Barrel Attack, the system first sends a “Lure” email containing some teaser text. After that, the system waits for a while (you can configure that time in settings below) and sends an actual phishing email. The “Lure” delay defines, in seconds, the time frame between the Lure and the attack emails for a Double-Barrel Attack.

To configure the LURE attack, please enable the options in the scenario settings:

Scenario Scenario Status: Running ⏸

Lure Delay ?

Once enabled, you can configure the lure template in the settings to the left:

You can use the [scheduler](#) to delay the lure and attack template.
