Configuration of your campaign

2024/04/20 13:03

When you start a new campaign you may either use:

- the Expert Setup: allows you to manually define each setting
- the Setup Wizard: guides you through the installation
- start with predefined campaign template: will do the whole configuration for you.
- risk assessment: create a real risk profile for your company by using recommended attack scenarios. Please don't forget to choose Industry type.
- Mail & Web Test: this scenario template is required for Mail & Web Filter test, which allows seeing what type of files can be accessed within the company network through mail or web.

What is the predefined configuration?

If you want to create a campaign in less than 3 minutes you could also use the predefined campaigns. The predefined campaign has only a very small set of templates available which you can select. But after entering the recipient and sender details it will do the remaining configuration by itself.

			Campaign Status Not S	ucy Phishi…	
~		Please select	Scenario	Base Settings	
	beck	Please select Data Entry Password (Sender Name	base occords	
	Data Entry Contest – Win iPad				
	Data Entry + Malware Download Simulation VPN Access Malware Download Simulation Encrypted File		Sender Email
