

# Configuration of your campaign

When you start a new campaign you may either use:

- the Expert Setup: allows you to manually define each setting
- the Setup Wizard: guides you through the installation
- start with predefined campaign template (called sample campaign in LUCY < 3.0): will do the whole configuration for you.

## What is the predefined configuration?

If you want to create a campaign in less than 3 minutes you could also use the predefined campaigns. The predefined campaign has only a very small set of templates available which you can select. But after entering the recipient and sender details it will do the remaining configuration by itself.
