

Introduction

We offer the possibility to test LUCY on one of our VPS on the Internet. The server will run the latest LUCY software with an unlimited license.

How long can you test LUCY on our VPS?

We provide you with a 7 days access to one of our LUCY servers. If you need a longer time period please let us know.

How do you access that server?

The server will be accessible on a public host via HTTPS. We will provide you with the login link & credentials.

I want to start testing. How do I proceed?

Drop us a mail and request access to a demo server including your company details and the time frame, when you would want access to the system. If the VPS is available we can give you access within the same business day.
