

Library setup

Setting up the template

Go to the settings → Templates → Awareness templates Edit the library

Click "Library" Activate and Deactivate the "Select All" checkbox to deselect every default template in the Library.

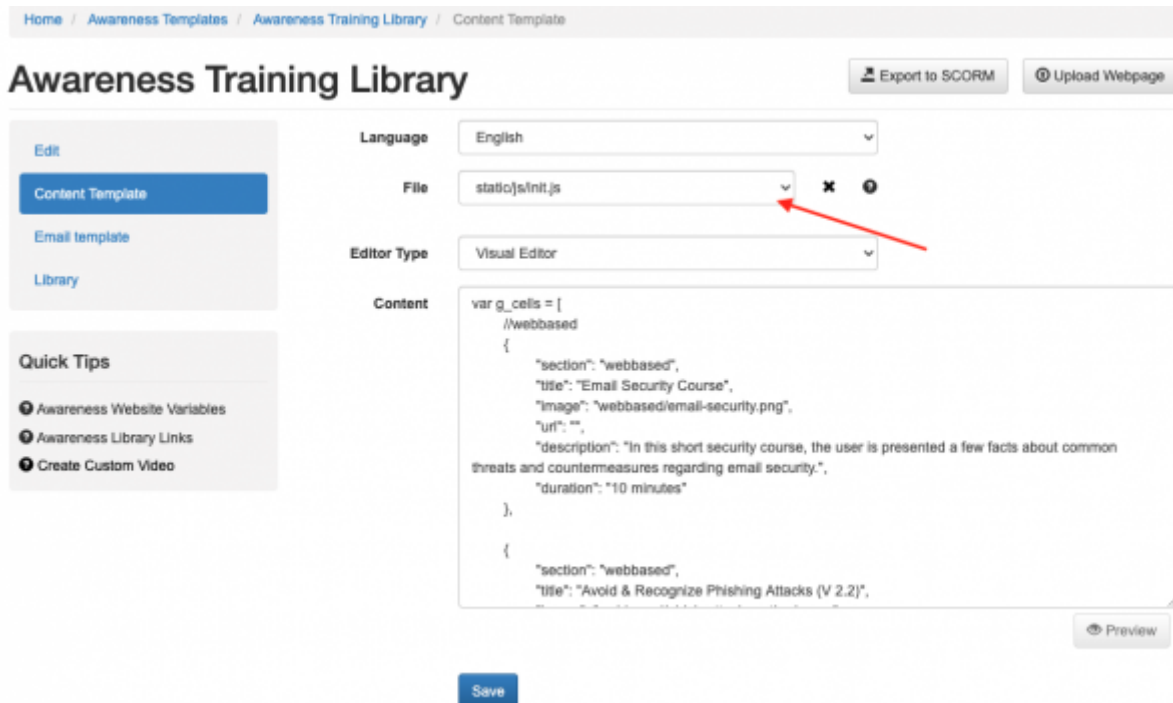

Now it is time to build your own library, activate every template you like for it to be in the library. In the example below, there are 7 templates activated.

The next step is to go to the "Content Template" and to edit `static/templates/init.js` Make sure that the

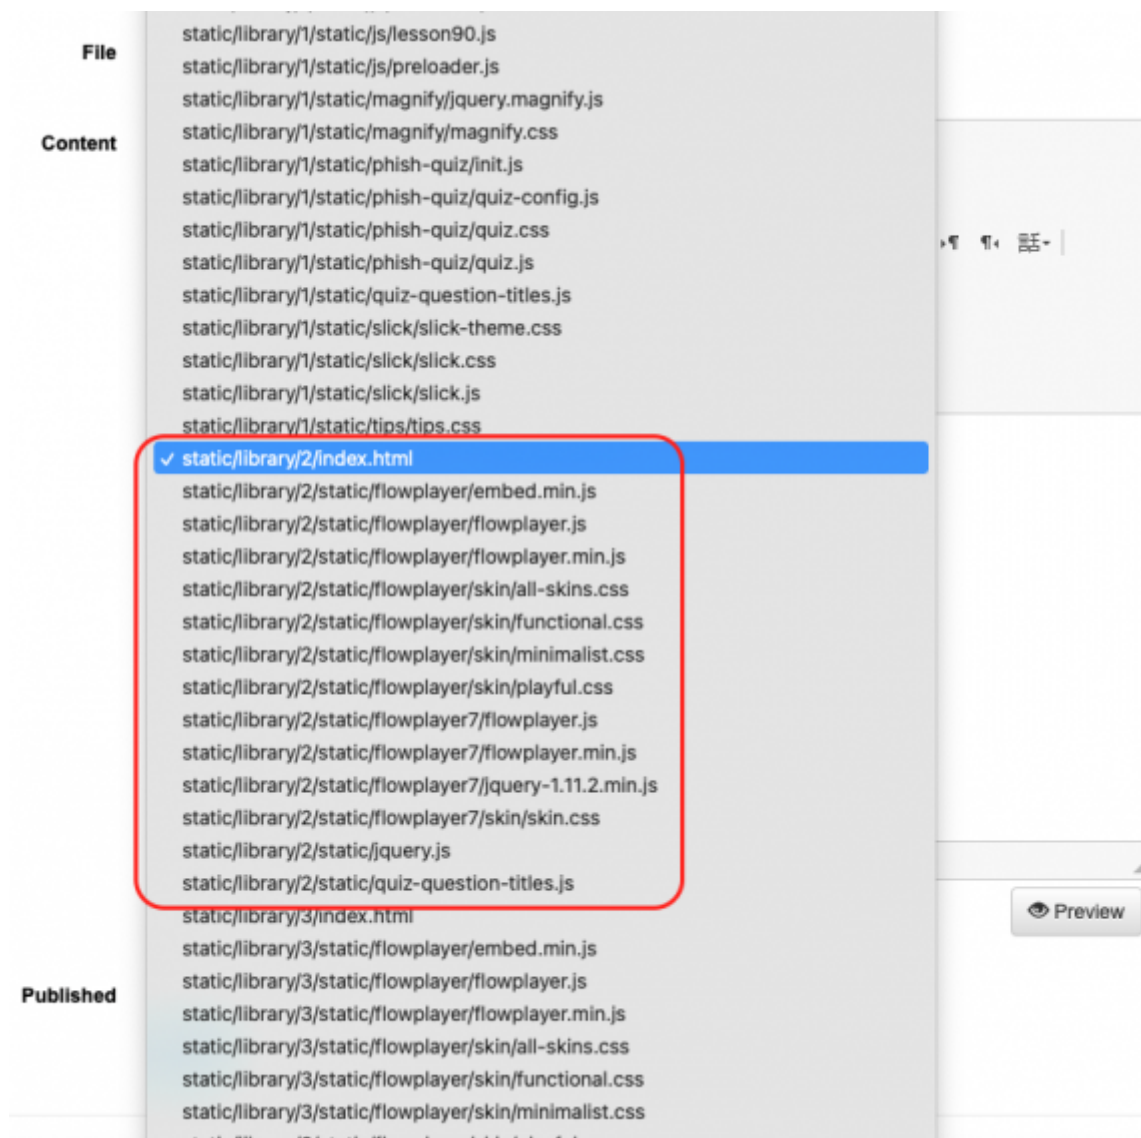

template names have correct names. The characters should match the names of the templates. In another case, a template with mismatching will not be visible in the Library. For example, the following names are not the same: *01 Mobilgeräten* *01 Mobilgeraten*

Spaces are also important. For example, the following names are not the same: *01 Some name of a template* *01 Some name of a template*

The screenshot shows the 'Awareness Training Library' interface. On the left, there is a sidebar with 'Edit' options: 'Content Template' (highlighted), 'Email template', and 'Library'. Below this is a 'Quick Tips' section with three items: 'Awareness Website Variables', 'Awareness Library Links', and 'Create Custom Video'. The main area is titled 'Awareness Training Library' and contains several fields: 'Language' (set to 'English'), 'File' (set to 'static/s/init.js' with a red arrow pointing to the dropdown), 'Editor Type' (set to 'Visual Editor'), and 'Content' (a code editor showing JSON data for two sections: 'Email Security Course' and 'Avoid & Recognize Phishing Attacks (V 2.2)'). At the bottom, there are 'Save' and 'Preview' buttons.

It is possible to check the media files added to the Library.

It can be seen that 7 "quiz-question-titles.js" are in the Library. These files contain the names of the questions. If the number of questions is incorrect, it can cause unreliable statistics in a campaign.

You can only experimentally determine which file belongs to which template.

The easiest way to do this is: execute step 4 (that is, delete all templates from the library)

1. go to the "Edit" tab and click the "Save" button
2. go to the "Content Template" tab, delete all files "quiz-question-titles.js" and click the "Save" button
3. go to the "Library" tab, add one template to the library, go to the "Edit" tab and click "Save"
4. go to the "Content Template" tab and edit the fresh file "quiz-question-titles.js". It will have a path "static/library/1/static/quiz-question-titles.js".
5. repeat steps 1 - 4 for any other templates you want to add to the library. The path of the next "quiz-question-titles.js" will contain "2", then "3" and so on.

Creating a campaign

We recommend using Wizard since it is quite comfortable.

Campaign Wizard: Type ✕ Close

1. Type
2. Campaign
3. Recipients
4. Review
5. Finish

Please choose a campaign type you would like to use.

Type	Description
 Attack Simulation	With an attack simulation (phishing, malware, smishing, USB attacks, etc.) you can test whether your employees are really familiar with the dangers of the Internet. Your Software Name provides a "safe learning environment" where employees can experience what real attacks would feel like.
 Educate Employees	Close knowledge gaps with Your Software Name's E-Learning. Your Software Name offers more than 200 interactive, web-based training modules (videos, tests, quizzes, games, etc.) on various security topics that can be provided to employees based on the results of the attack simulations or independently of them.
 Infrastructure Tests	Find out what kind of dangerous file types can get to the employee's inbox, what can be downloaded and how big the risk is, if such a file is actually executed. Test the local windows security settings, the risks associated with downloads and the security of your mail infrastructure-tests-types.
 Human Firewall	Turn your employees into human firewalls. The Your Software Name mail plugin for Gmail, Outlook & Office 365

[Skip the wizard and enable expert setup](#)
[Next >](#)

Next, follow the instructions on the screen, fill in the required fields. Using a wizard will avoid gross mistakes.

There is no need for additional settings if you used a wizard. However, there is the possibility of additional verification of the library configuration. See the following points:

Go to "Awareness Settings", click on the button "Edit Awareness Settings" and go to "Website":

Quick Tips

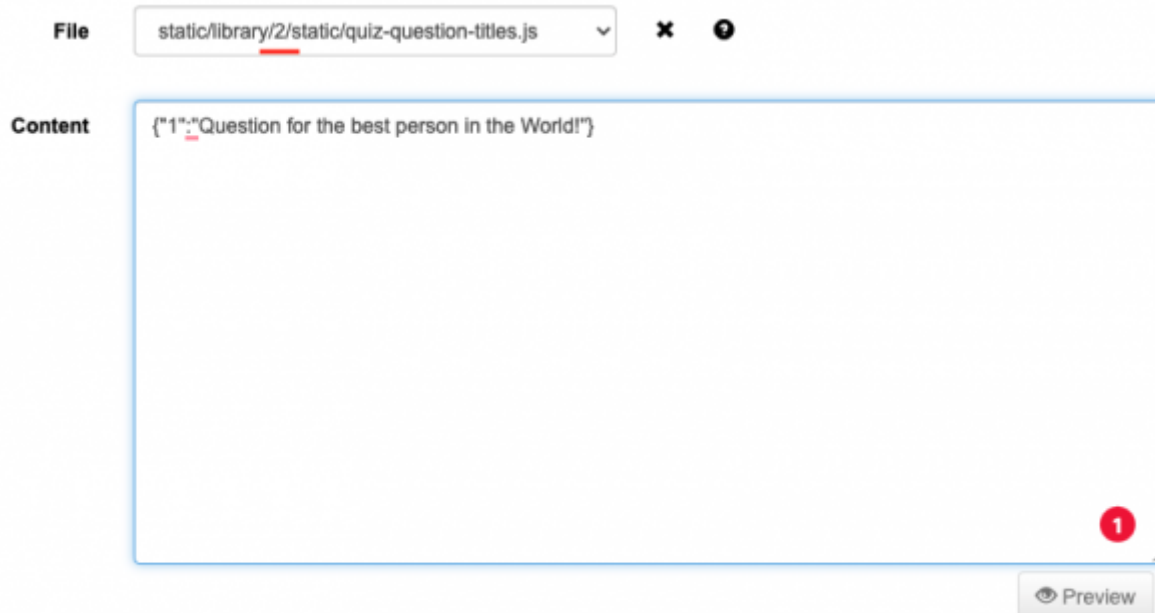

- Awareness Website Variables
- Awareness Library Links
- Quiz Integration
- Create Custom Video

Here are all of the files included in the library:

For example, the image above shows the files related to the 2nd template. You can see what this template is by opening the index.html file.

Thus, if you want to edit the questions of the 2nd template, you need to open the 4th file "quiz-question-titles.js":

Check all of the "quiz-question-titles.js" files! It should have questions of the appropriate templates. If something is wrong, it is possible to fix these files right here.

Statistics

In some time after the start of the campaign, statistics should appear. To check it, go to the campaign → Statistics → Recipients and click on a user.
