

What Gets Updated in LUCY?

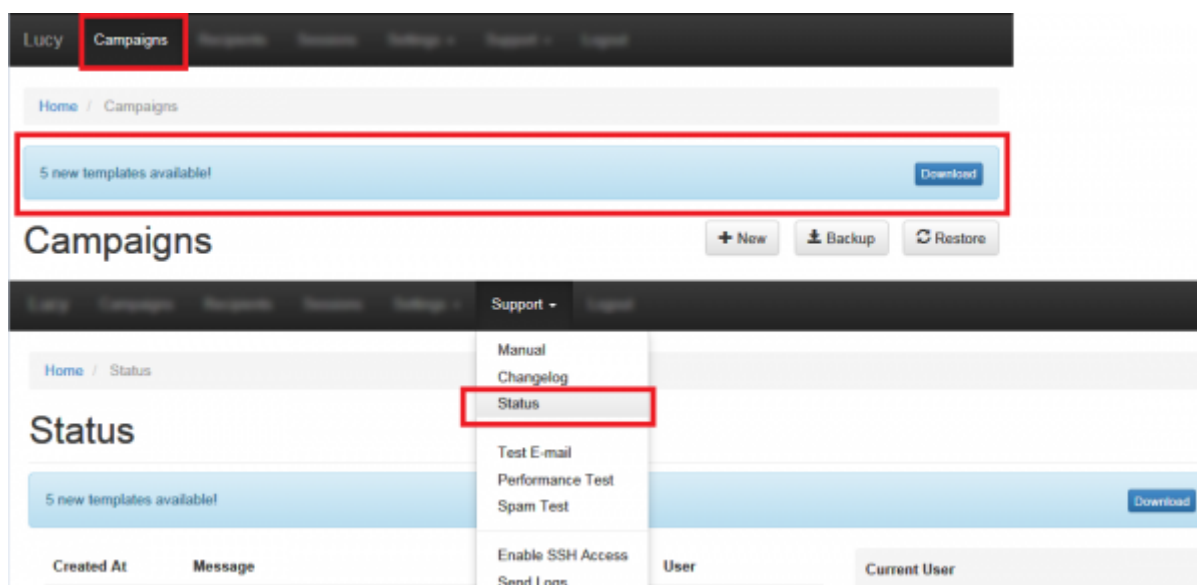

There are three types of updates in LUCY:

- **Major LUCY updates:** Within each major update (like 2.4,2.5,2.6 etc.) LUCY **updates the application and the operating system** (including all relevant security patches).
- **Minor LUCY Updates:** During minor updates (like 2.4.1, 2.4.2 etc.) only application hotfixes and minor improvements are provided.
- **Template Updates:** Independent from LUCY system updates there are as well template updates for the landing pages, awareness pages, message templates and the file templates. You will be notified if there is a new or updates [template which you can download using the download button](#).

Does LUCY inform me about updates?

All updates for LUCY are stored on a centralized server. As soon there is a new version LUCY will automatically notify you two different ways:

- **Dashboard:** After you login to LUCY you will be informed on the dashboard if there is an update available.
- **Status:** Within the "settings/status" navigation menu you can find the current update notifications.

Where can I find the update details and release notes?

The release notes can be found in the LUCY UI under support/release notes for past updates. For current updates you will find the update information in the news feed of the dashboard and/or under <http://news.gtta.net/>

Updating while running campaigns

In order to do an update you need to stop the campaign. The update process usually takes between 1-5 minutes. Within this time frame, all landing pages are stopped and no mails are sent. If a recipient clicks on a phishing link, he will get the error message defined within the [white label settings](#) or the [domain settings](#). After the update you can resume all your campaign without losing any data. Just click on "[resume](#)" the campaign without re-sending any mails or affecting the stats.

How to do an update?

Updating LUCY is easy and straightforward and can be done in two different ways:

- **Updating LUCY if you have internet access:** in this case you can click the update notification button to initiate the update or you can go directly to the update feature that can be found under "Settings/Update" and click the icon to start the update.

The image shows two screenshots of the Lucy Security web interface. The top screenshot is from the 'Campaigns' page, showing a yellow notification bar that says 'Your system is out of date! Lucy 3.0 is available!' with a blue 'Update' button highlighted by a red box. The bottom screenshot is from the 'Update' page, showing the current version as 4.7.4 and the next update as 4.7.5 (patch). A blue 'Update Now' button with a circular arrow icon is highlighted by a red box. Below the button, a list of new features is displayed: 'New setting System Notification Email in Advanced Settings', 'Multi-language support in Outlook Plugin', and 'New design of the End User Portal'.

Your system is out of date! Lucy 3.0 is available!

Update

74 new templates available!

Home / Update

Update

| | |
|---------|---|
| Version | 4.7.4 |
| | Updated 11.08.2020 16:25:17 |
| Update | 4.7.5 (patch) |
| |  |

New features:

- New setting System Notification Email in Advanced Settings
- Multi-language support in Outlook Plugin
- New design of the End User Portal

The screenshot shows the LUCY web interface. At the top, there is a navigation bar with 'Support' and a user profile icon. Below the navigation bar, the breadcrumb 'Home / Update' is visible. The main heading is 'Update'. Underneath, the current version is '4.7.4' with a timestamp 'Updated 11.08.2020 16:25:1'. Below this, the next update is '4.7.5 (patch)' with a circular refresh icon. A dropdown menu is open, listing various system functions: Status, Manual, Changelog, Test email, Performance Test, System Monitoring, Spam Test, Backups, Migration Tool, Exports, License, Tickets, Invoices, **Update** (highlighted with a red box), Reboot, and SSH Password. To the right of the dropdown, there are links for 'Advanced', 'Portal Se', 'll export', and 'ificate'. Below the dropdown, there are sections for 'New features:' and 'Improvements:' with their respective bullet points.

- **Updating LUCY if you don't have internet access:** In this case we will build an offline update file for you which can be uploaded to LUCY within the web form. The updated file can be provided by us on request.

Update

The screenshot shows the LUCY web interface. At the top, the breadcrumb 'Home / Update' is visible. The main heading is 'Update'. Underneath, the current version is '2.5.3' with a timestamp 'Updated 05.11.2015 20:11'. Below this, the next update is '2.6' with a circular refresh icon. The 'Update' button and the version '2.6' are highlighted with a red box. Below the update information, there is a section for 'Update notes:' with a list of bullet points: '- Smishing support', '- Multi-language scenarios', '- Report sections improvement', '- Select particular charts that will appear in report', '- Victim side optimizations', '- Offline updates need no access to Debain repositories', and '- Multiple bugfixes'. At the bottom, there is a timestamp 'Checked 20.11.2015 12:32'.

Who is entitled of updates?

- **Community edition:** only access to minor updates (like 2.4.1, 2.4.2 etc.). Minor updates are mostly security & bug fixes.
- **Commercial Edition:** Access to minor updates (like 2.4.1, 2.4.2 etc.) and as well major updates (like 2.4,2.5,2.6 etc.). Major updates always introduce new features.

What is the address of the update server?

In case you want to set a firewall rule to open access to the update server please consult our [network communication section](#).

Troubleshooting

Please check our [update troubleshooting section](#) for support.
