# Automated URL Shortening

URL Shorting within SMS

### Level 3 Headline

## Syntax used in the login fields on the web page

When you place the %link% variable within the message body and your scenario uses a public domain name, it will automatically be shortened. The link will look like “http://is.gd/9VjDKF” to fit into one text message. If you use an IP address for your landing page the link will be not shortened.
