

## SMS URL Shortening

When you place the %link% variable within the message body and your scenario uses a public domain name, it will automatically be shortened. The link will look like "<http://is.gd/9VjDKF>" to fit into one text message. If you use an IP address for your landing page the link will be not shortened.

## URL Shortening with landing pages

Within the scenario settings you can choose an URL shortening service from the dropdown menu. This only works for domain names (not IP's):
