

SMS URL Shortening

When you place the %link% variable within the message body and your scenario uses a public domain name, it will automatically be shortened. The link will look like “<http://is.gd/9VjDKF>” to fit into one text message. If you use an IP address for your landing page the link will be not shortened.

URL Shortening with landing pages

Within the scenario settings you can choose an URL shortening service from the dropdown menu. This only works for domain names (not IP's):
