

# SMS URL Shortening

When you place the %link% variable within the message body and your scenario uses a public domain name, it will automatically be shortened. The link will look like "http://is.gd/9VjDKF" to fit into one text message. If you use an IP address for your landing page the link will be not shortened.

## URL Shortening with landing pages

Within the scenario settings you can choose an URL shortening service from the dropdown menu. This only works for domain names (not IP's):

Anonymous Mode

Track Opened Emails

Send Link to Awareness Website Automatically

Awareness Delay: 2679

Advanced Information Gathering

Success Action: Data Submit

Collect Data: Partial

Double Barrel Attack

Url Shortener: N/A

Login Regexp: is.gd

Password Regexp: goo.gl, blt.ly

Save
