

# How to track users watching an awareness video

## Method 1: using the quiz checkbox

This method allows you only to verify, if the video was played. It does not allow tracking of the video length. Please use method 2 to track more details.

- Mark the awareness template or website as "Quiz"

The screenshot shows the configuration interface for an 'Email Security Course (Version 2.1)'. On the left, there are buttons for 'Edit', 'Content Template', and 'E-mail Template', along with a 'Quick Tips' section containing a 'Create Custom Video' link. The main form has the following fields:

- Name:** Email Security Course (Version 2.1)
- Languages:** A list of languages with checkboxes: Dutch, English, Italian, Spanish, and Turkish. Each has a close icon (X).
- Icon:** A search bar with a 'Durchsuchen...' button and a preview of an email security icon.
- Description:** A text area containing: 'In this short security course, the user is presented a few facts about common threats and countermeasures regarding email security. Duration: 10 Minutes | Skill Level: Low | Audience: All | Interactive: No'.
- Quiz:** A checkbox labeled 'Quiz' with a plus icon, which is highlighted by a red box and pointed to by a red arrow.
- Save:** A blue button at the bottom.

- Make sure your awareness website (or template) has the quiz-question-titles.js static file with the following content: {"1": "Video Played"}
- Add "onload" attribute to body tag of HTML content, so you get the following:

```
<body onload="lucyQuizStart();">
```

- Add "onplay" attribute to video tag of HTML, so you get the following:

```
<video onplay="lucyQuizAnswer(1,1);">
```

## Method 2: using the video tracking JavaScript

Using our custom tracking JavaScript which can be downloaded [here](#), allows you to track video's played in LUCY's "flowplayer" which are used for all our video templates. The JS should be inserted into the bottom of the page where the flowplayer video is uploaded (please don't forget to add the script tag <script> at the beginning of the script and </script> at the end of the script:

Language: English

File: index.html

Content: Quickcode

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>Training Video</title>
  <meta charset="UTF-8" />
  <link href="/admin/settings/awareness-template/73/content/11/file/flowplayer/skin/functional.css" rel="stylesheet" />
  <script src="/admin/settings/awareness-template/73/content/11/file/jquery.js"></script>
  <script src="/admin/settings/awareness-template/73/content/11/file/flowplayer/flowplayer.min.js"></script>
</head>
<body>
  <div class="flowplayer">
    <video>
      <source src="/admin/settings/awareness-template/73/content/11/file/video.webm" type="video/webm" />
      <source src="/admin/settings/awareness-template/73/content/11/file/video.mp4" type="video/mp4" />
    </video>
    <script>
      $(function () {
        var started = false;
        var played = 0;
        var videoLength = 0;
        var finished = false;
      });
    </script>
  </div>
</body>
</html>
```

This script allows you to track a video start and finish event and also display the progress in statistics (rounded percent in different event types like video-10 for 10% video played or video-90 for 90% video played, etc.). When the video is started, it sends a "video-start" event. When the video is finished (played to the end), it sends a "video-finish" event to LUCY which leads to statistics like in this graphic:
