

Initial Position

LUCY needs to access certain servers in the internet to download the latest templates or updates. This is done via HTTP. Therefore you need to make sure LUCY is able to communicate via HTTP to the [according servers](#). Some networks require, that the HTTP communication is handled by a proxy. In this case you can configure the proxy settings in LUCY.

Proxy Configuration

In the [Settings Menu](#) you can specify a proxy server together with the port and login authorization. LUCY will use those settings to connect to the internet.

The screenshot displays the 'Advanced Settings' interface of the LUCY application. At the top, there is a breadcrumb trail 'Home / Advanced Settings' and a 'Factory Reset' button. The main section is titled 'Advanced Settings'. Below this, several configuration fields are visible: 'Software Name' (set to 'Your Company Name'), 'Admin Path' (set to 'admin'), 'Date & Time' (set to '21.11.2016 19:39'), and 'Time Zone' (set to 'UTC+01:00 - Brussels'). A red rectangular box highlights the 'Use Proxy' section, which includes a checked checkbox labeled 'Use Proxy' and four input fields for 'Proxy Host', 'Proxy Port', 'Proxy Login', and 'Proxy Password'. Below the proxy settings, there are 'Password Settings' with a checkbox for 'Set User Password Policy' and a 'Rotation Period' dropdown menu set to 'Off'.
