

# Initial Position

LUCY needs to access certain servers in the internet to download the latest templates or updates. This is done via HTTP. Therefore you need to make sure LUCY is able to communicate via HTTP to the [according servers](#). Some networks require, that the HTTP communication is handled by a proxy. In this case you can configure the proxy settings in LUCY.

## Proxy Configuration

In the [Settings Menu](#) you can specify a proxy server together with the port and login authorization. LUCY will use those settings to connect to the internet.

The screenshot shows the 'Advanced Settings' page in the LUCY interface. At the top, there is a breadcrumb 'Home / Advanced Settings' and a 'Factory Reset' button. The main heading is 'Advanced Settings'. Below this, there are several configuration fields: 'Software Name' (text input with 'Your Company Name'), 'Admin Path' (text input with 'admin'), 'Date & Time' (calendar/time picker showing '21.11.2016 19:39'), and 'Time Zone' (dropdown menu showing 'UTC+01:00 - Brussels'). A red rectangular box highlights the 'Use Proxy' section, which includes a checked checkbox 'Use Proxy', and four text input fields for 'Proxy Host', 'Proxy Port', 'Proxy Login', and 'Proxy Password'. Below the proxy section, there are 'Password Settings' including a checkbox 'Set User Password Policy' and a 'Rotation Period' dropdown menu set to 'Off'.
